Memphis, Tenn. MEMPHIS APPEAL

THURSDAY, : FEBRUARY 7, 1878.

MISSISSIPPI RIVER IMPROVE-That the welfare of the vast population re siding in the valley of the Mississippi, and the proper maintenance of their commerce require improvement of the river, is a sentiment so deeply sunk into their minds by the experience of years that no difficulty in accomplishing the task can deter them from having that great and salutary work commenced, carried on and perfected. The required improvement combines, as objects, a continuous depth of water in the river sufficient for the purposes of navigation, and the rescue from destructive overflow of thousands of acres of valuable lands. In the upper portions of the river the former of these objects has hitherto been the main, if not sole object of attention; in the lower, the latter. The difference in the objects pursued by both sections has divided their strength, or has even fed one party to assist in counteracting

they who are more interested in the reclama- and Chicago. In January last four she announced a few days ago that on the thousand four hundred and ninety-one second of February she was to die, or, at sacks of cotton-seed were received in New Orleons alone, for manufacture. A least, her soul would leave her body, and after she had been in a state of ecstasy or death, she was to be rein New Orleons alone, for manufacture. A demand has also recently sprung up for the raw seed itself for exportation to Europe, and two or three weeks ago a tow of barges, with a freight of twenty-four thousand sacks. United States, and engaged in a project for with a freight of twenty-four thousand sacks of cotton-seed, arrived in New Orleans for since last Monday crowds of persons have facilitating commerce at home and abroad. for the great Mississippi valley those im-This fact also shows that we may look for an ncreased demand brings higher prices, the as if she were dead, and quite pale and thin make it another Egypt, pouring its rich and product of the seed promises to become an Around her neck was a gold chain, to which fertile treasures into the lap of every nation important addition to the profits of the cotton-grower. All this is cause for rejoicing was suspended a handsome crucifix of the same metal. Since Monday she has been unable to speak, but her attendants say she is where commerce sends its flag. That common among our cotton-planters, but let them is found in the plan whose practical never forget that they owe it to the researches | thing which the believers in this modern excellence has been triumphantly demonstrated by Captain Eads in his jetties at the of science, man's unfailing benefactor. mouth of the Mississippi river. FATHER HEINAN'S MIRACLE. is wild with rumors. An Enquirer correspondent had an interview to-day with Father

Heinan.

In response to a question where the soul had been during its absence from the body, he said: "The guardian angel has directed that that shall not be revealed. It would do no good, and would cally create mockery. One man has already been punished for his mocking, and there might be others." At first Father Heinan claimed that the woman's lungs had been entirely used up, and had ceased to perform their functions, when the soul also left; when it was suggested that this was a simultaneous departure of animal soul life, Father Heinan corrected himself. He did not mean to say that the lungs were entirely, but terribly decayed, and of no further use, and hemorrhages have now ceased, and neuralgia of the face, with which she had been afflicted, had also been cured. This was a miracle cure, said Father Heinan, and there is no delusion about it.

During the conversation Miss Greth was in

During the conversation Miss Greth was in

"Holy Joe," as Father Heinan is here popularly known, only seeks a little notoriety from these divergent opinions. Several fisticuffs have ensued, and the feeling is becoming stronger. Some claim to believe him honest, but the victim of an emotional and hysterical woman. She made her first extensive promenade this afternoon, when she visited Father Bunce, in this place, walking about a mile each way.

NEW YORK,

NEW YORK, February 6.—At a meeting of the creditors of Henry, Curran & Co., the suspended drug firm, Mr. Henry stated that suspended drug firm, Mr. Henry stated that the out of the stock and other assets he could pay twenty cents on the dollar, but with the secrets of the firm, such as recipes for patent medicines, he could pay thirty cents. The plan of payment was five per cent, in eash, and the remainder in six, twelve, eighteen, twenty-four and thirty months.

MORE ABOUT NASSAU. A Pineapple Plantation—A Bauyan Tree—A Place to Rest in.

Letter No. 13. Among the flowers growing at our feet, as we proceeded on our journey, none looked nandsomer than thousands of beautiful blue and white convolvuses, which were of unusual size and brilliancy; but presently a scene opened whose attractiveness made the whole landscape even more lovely than before. We had reached one of the "liona" of Nassau—a lake which they have had the bad taste to call the lake of Killarney. Its waters are brackish, and of the soft, pale blue the sky presents when a certain amount of moistur in the atmosphere softens down the holder tone of the full color. It was the azure of early morning flowing at our feet, and wind-ing in and out among islands, and inlets and cores, as fantastical as the freaks of a woman's will, and as graceful as the wilfullness of early childhood. This very peculiar color is not confined to the lake, it is seen also in the harbor of Nassau, and is owing to the waters of the ocean—in the lake mingled with the fresh fluid from springs and brooks—flowing over a bed of milk-white coral. In order to see the view more perfectly, we climbed up the neighboring hill. The climb was not a pleasant exercise, for the hill, like every-where else on the island, was a mass of coral formation, the rough surface of which was as bad to walk upon as a newly macademized road, with an unevenness added that that road is free from. The hill was cleared of its old covering of brush, and pine, and palmtree, and every crevice among the coral bore a plant with long, curved, thick leaves of a pale green. At the top of the hill were two or three negro cabins, containing the persons who took care of the plantation. We were kindly invited into first one and then another of them. A handsome negress,

another of them. A handsome negress, wearing heary cornelian ear-drops, brought us a glass of water on a tray; the baby sitting on the floor burst out with loud cries at the sight of our white face—we suppose it could not be at any want of manly beauty, of course; but we are too modest to discuss that point. Another of the women surprised us by an invitation to stand at a point by one of the cabins, "for," she said, "the view is very fine there." And she was right. The blue lake lay not only where we had left its shore, but extended round the end of the hill, and as far as could be seen on its other side. But it did not lie in a mass like our large lakes; it spread and contracted; our large lakes; it spread and contracted; now it ran far into the land, then it embosomed an island, then a wide swell of water stretched toward the horizon. Everywhere on the three sides of the hill, the light blue of on the three sides of the hill, the light blue of its waters contrasted with the varying shades of green of the surrounding foliage. Its cerulean blue made it look as if shreds and masses of the sky had found an abiding place on earth, but instead of being flecked by clouds, it was varied by trees and shrubs, and by wide patches of land covered with lively green, bordered with broad leaved palms and the waving tufts of the tall cocoanut trees. But there was still antall cocoanut trees. But there was still anther object to gratify our curiosity. Around the suffinit where we stood was three hundred acres of cleared land, all planted with one plant; whose long leaves hanging in graceful curves, and whose pale green color we have already mentioned. We now learned that these plants were those of the pineapple, and that in May three hundred acres of them lying before us would each a banyan tree. It was small but perfect. The main stem, which grew not far from the which, at almost every eight or ten inches distance, descended stems that appeared almost like ropes falling from a line; these divided before reaching the surface of the water, which was very shallow new stem, having its own sources of vitality, yet forming an integral portion of the parent tree. Pleased with our delightful and soli-

ties, but we were going within the Spanish dominions, and Spain distrusts the Americanos. They think we sympathize with the insurgents, who, in the wilds of the interior, have so long struggled for freedom from the mother country, and perhaps they are not far courteous gentleman, disposed especially to show us kindness as a member of the press, tent. He spoke of the assassinated Prim with affection, as an attached friend, and assured us that Queen Isabella, though cursed with permitted in a man, was personally kind in disposition and generous in conduct. The precious document we received from him cost four dollars and sixteen cents; On arriving at Havana it had to be vised by it was continually wanting something that had to be paid for. Next day we visited the Queen's Staircase and Fincastle, which are among the celebrities of the place, but we

their rest on the white sea-sand, or are busi-ly occupied doing what the negroes complain is so difficult, "gettin a libbin." The absolutely perfect clearness of the water permits face, and from the wrinkling of the surface by every passing breeze. These difficulties are ingeniously overcome deep; a pane of glass is set in the lower and broader end. By pushing the glass a little below the surface the reflection is avoided, the observer to possess it, his negro boat-man will dive below and bring the coveted

them were seen by our party of delegates; twenty-nine of them are put under the head of islands, six hundred and sixty-one are cayes, while there are twenty-three hundred and eighty-seven mere rocks of various sizes. Coral reets, and consequently breakers, are numerous and dangerous to sailors unaccustomed to navigation among them. New Providence does not owe its prominence to its size—it is only twenty-seven miles long

and seven broad, while some of the others are as much as a hundred miles long, but the cultivated brains of the Bahamas are mostly confined to its narrow area. One of them, St. Salvador, was discovered by Columbus in 1472. The Spaniards carried off its gentle natives to work and perish in the mines of Hayti. Britain has held possession of the group since 1743, and the inhabitants carry on a trade in the products of the salt ponds, sponges, fruits, dye woods, mahogany, and other valuable hard woods. In the other twenty-eight islands, without New Providence, are about fifty small towns, and thirty thousand people. Such is the information the books give; there is no responsibility for it on the part of THE COLONEL.
